

AUSTRALIAN
INNOVATION

PRODUCTION

WOODSHIELD timber posts feature a simple yet revolutionary protection system completely free of chemicals. The production process coats a machined pine timber pole in a protective layer of plastic up to 6mm thick, encasing the post to a finished size of 83mm standard post, 100mm round or 123mm for row-end posts. Rectangle fencing rails are produced in the same way.

The Premier Coated Timber Posts

- The post that does not rust or rot
- Safe for horses & weather resistant
- Smooth, so no splinters or cracks
- Will not snap and be a hazard to the animal
- Non edible / NO chemical issues
- NO Painting / NO termite issues
- Organically sustainable & fully recyclable
