

# Woodshield Posts Survive the Victorian Bush Fires

**“Fires burn across Victoria after the worst day since Black Saturday”  
HeraldSun - February 12, 2014**

The Woodshield posts went through the same intensity of fire as the treated timber posts. The Woodshield posts have no splinters or cracks for the flame to catch on and there are no chemicals to fuel the fire.

A sustainable fencing option where standard fasteners can be used.

Untreated timber encased in recycled plastic  
NO rot - NO rust - NO chemical issues - NO termite/white ants
